PROJECT REPORT

Group 4 :

1. Sihab Mahmud (19202103032)
2. Sourov Karmokar (19202103020)
3. Wakibul Zaman (19202103009)

Project Name: **STUDENT RECORD KEEPING SYSTEM**

The student record keeping system maintains records of students, the courses and modules on which they are registered and the outcome of their studies. With this system we can store the student's data properly and limit the data access between different types of users. In student record keeping system, admin that accessed by administrators and Students also access the system to view their results. Through this system it is possible to find different data of the student quickly, it can save a lot of time. Besides, we are going to use c# language for this. So, as beginners of C# language, “student record keeping system” seemed to be a good topic to start with.

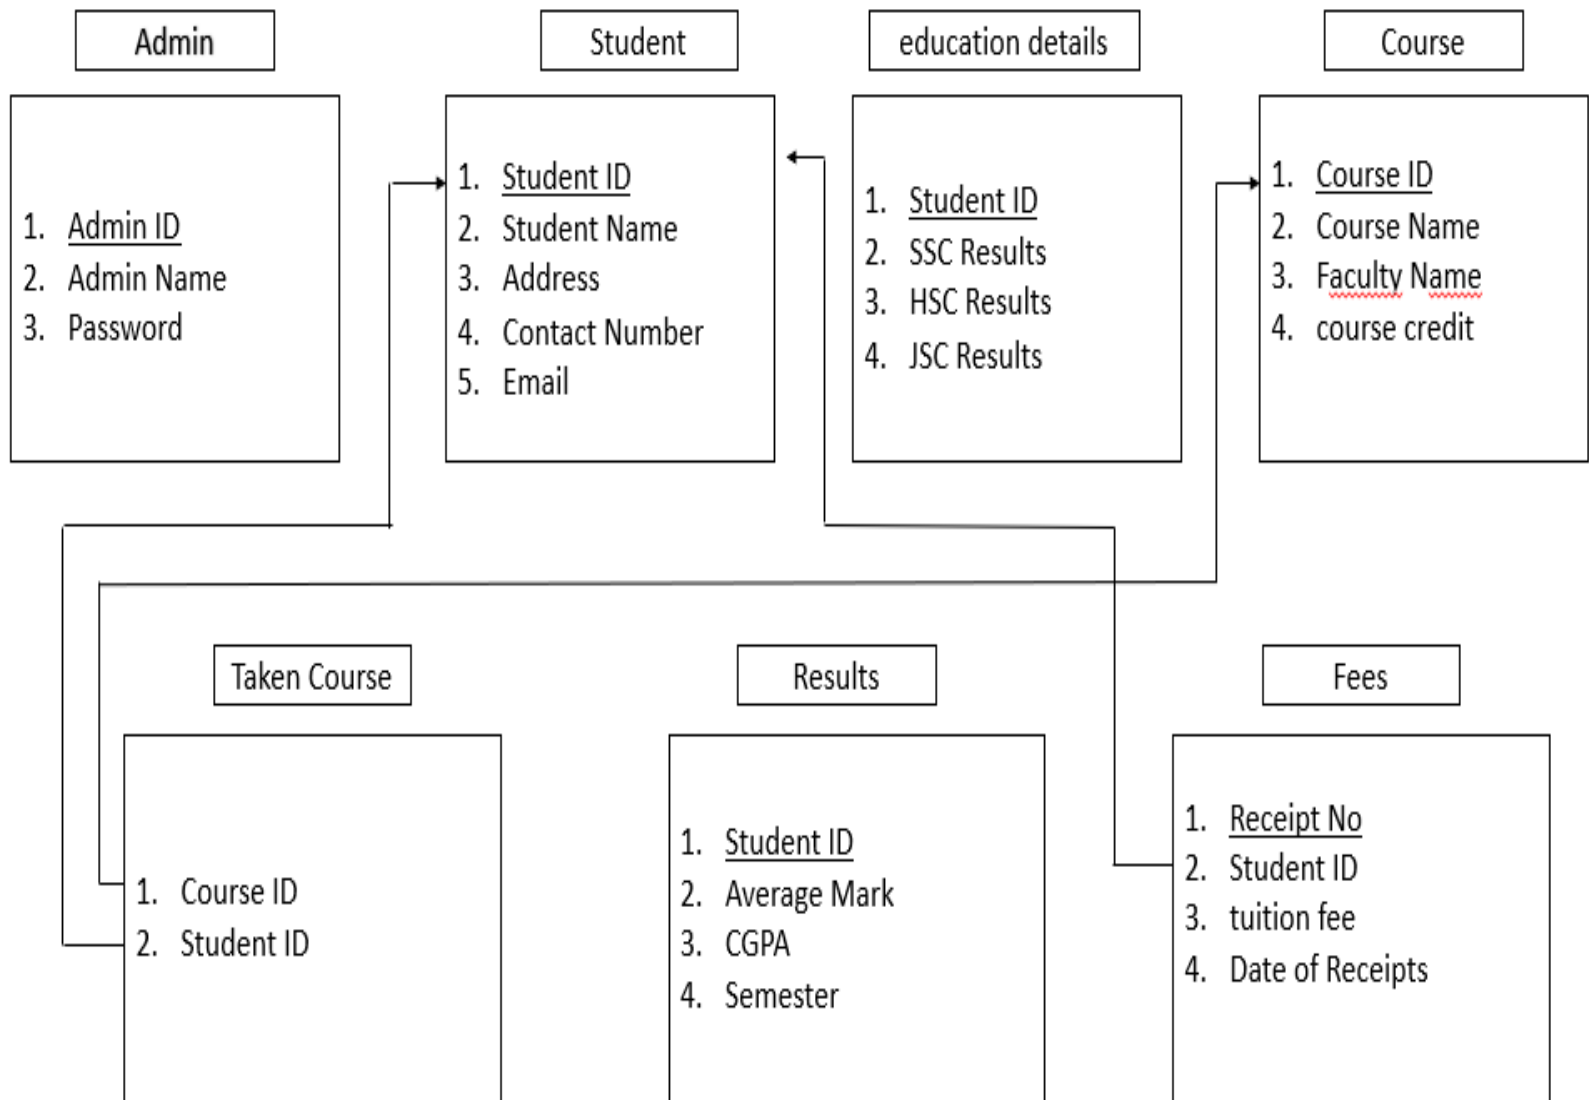

Requirements:

- Visual Studio Code
- My SQL

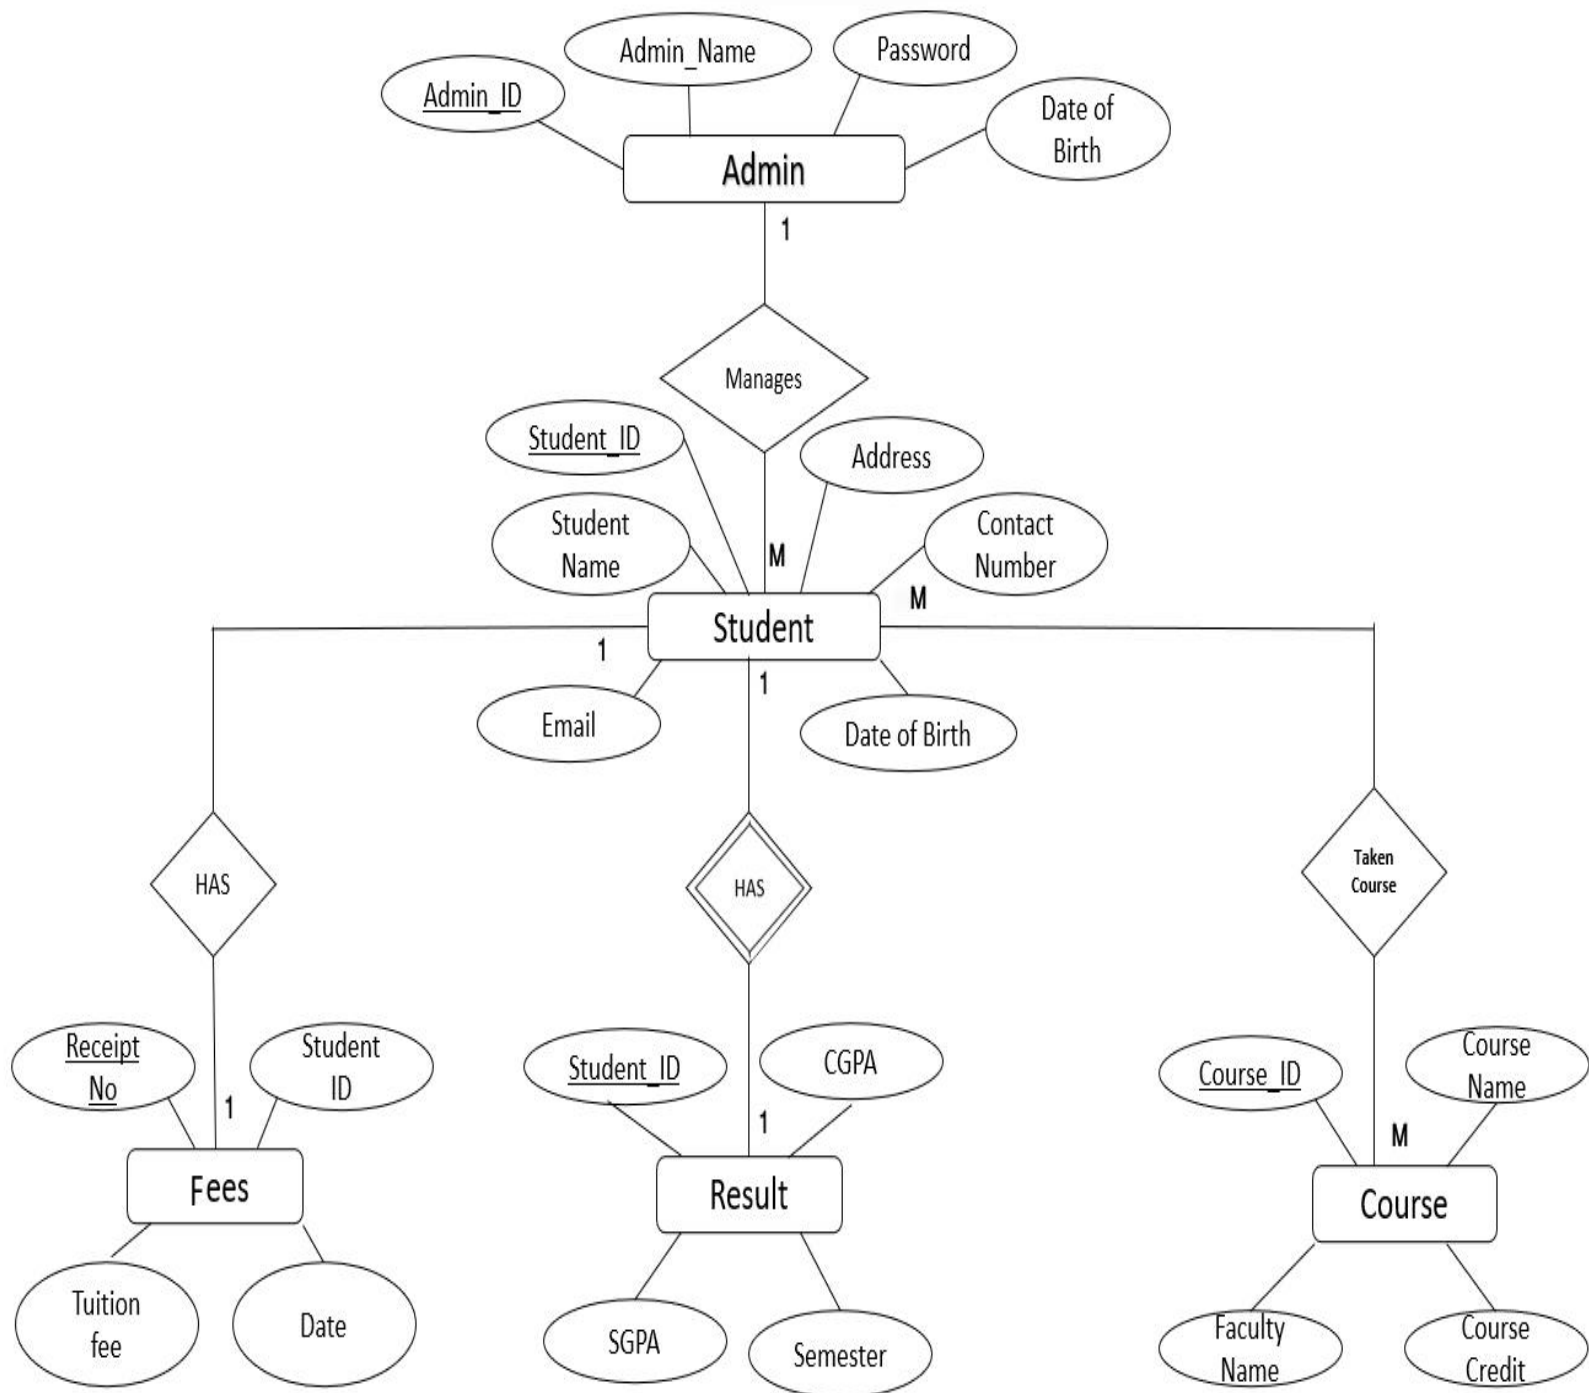

Modules:

1. Log in for both admin and student .
2. the admin can add information and delete update or view existing information .
3. the list will show student id, name,intake ,section.parents name, address and other details.
4. The student can view his/har existing information .
